

Designed with agility in mind, the Agylia Learning Management System (LMS) offers all the benefits of the very latest technology in a proven and affordable solution to help you reach your goals – now and in the future.

Agylia is a modern, highly secure and scalable, mobile-ready LMS that fully supports the latest Experience API standard.

With Agylia, you can schedule, target and deliver many different types of training, reference and support materials, providing them to all learners, whether they are in the office, travelling or working remotely.

Total mobile support

Agylia provides an attractive, easy-to-use and fully responsive user interface for online learners with a set of companion mobile learning Apps for tablet and mobile devices. These Apps enable users to access the system and its content from their own devices. Content can be downloaded, so it is available even when users are not connected to the internet – and it's all fully tracked!

Extended enterprise – internal and external

Agylia is designed to serve the extended enterprise, supporting users outside of your organisation – such as suppliers, distributors and customers – as well as your own staff.

Agylia enables you to operate multiple individually branded sub-portals for your customers or different business units. You can deliver all types of content to various groups of

users on a global scale and administrators can easily add, delete and target content, courses and curricula. Delegated administration enables nominated staff to manage different groups of users, large or small.

Track any learning activities

As well as traditional SCORM, Agylia supports the Experience API standard, a transformational learning technology that is revolutionising the way learning and its impact is measured.

Now you can distribute and track usage of any digital learning assets such as eLearning and microlearning courses, videos, eBooks, games, Office documents, and much more. Learner interactions with all your different forms of training and resources are tracked and recorded and made available for reporting. Crucially this includes learning activities both inside and outside of the LMS.

We recognise that learning occurs everywhere, is accessible in many different forms and is not limited to the traditional SCORM-tracked eLearning. There's real support for the 70:20:10 learning model and this enables you to identify the patterns, behaviours and learning paths that lead to the greatest performance gains – based on the specific key performance indicators (KPIs) most relevant to your business.

True cloud

Agylia has an advanced distributed cloud-based architecture that enables you to scale the number of learners from a few hundred to hundreds of thousands, quickly and easily.

Agylia is highly secure, resilient and boasts excellent performance, even with vast user numbers and large file sizes.

Our optimised content delivery network means that we can position your data and content in different locations to optimise performance and deal with tax and data sovereignty issues.

Engage with social learning and gamification

Many organisations are beginning to explore the benefits delivered by enabling their learning community to share knowledge and experience with one another. This is supported with content commenting and rating, discussion boards, and uploading and sharing of user-generated content. You can now harness the skills and experiences of your own workforce in new innovative ways. Recognising the positive influence that gaming principles can have on both content and learning programmes. Agylia provides you with a flexible engine that enables system wide gamification options. These include competitive leaderboards, points and achievement awards.

Security

We all recognise that we live in an increasingly security conscious world. Agylia protects your IP and your users' personal information with a range of enhanced options tailored to meet specific security, regulatory and compliance requirements.

Working with your existing LMS

Your organisation can take full advantage of all the latest features and benefits offered by Agylia – even if you do not wish to replace your existing LMS. With modern APIs, Agylia can be implemented alongside your existing LMS and other HR systems, providing all the benefits with the minimum of disruption.

Agylia is the proven choice

Agylia has been successfully implemented by some of the largest, most demanding and prestigious companies in the world. They chose Agylia for its world leading functionality, and because they wanted friendly service, together with comprehensive planning and support to make the implementation fast and easy.

At a glance

Any content, anywhere – Agylia can target, deliver and track all of your digital learning resources, including eLearning and microlearning courses, eBooks, videos, Office documents and many others – all targeted to selected learner groups.

Brand friendly and easy to use – use your own branding or choose to use separately branded sub-portals.

Multi-device learning – Agylia delivers content to desktops (for online use) as well as tablets and mobiles (for use online and offline) – so learners can use your content wherever they are.

Native mobile learning Apps – for iOS and Android devices enables learners to download and access content for on-the-go learning.

Social – enables content commenting and ranking, discussion forums and user generated content options.

Gamification – Agylia has a powerful gamification engine, enabling you to increase learner engagement with optional competitive leaderboards, points, trophies and prizes.

SCORM and Experience API support – you can track and receive reports on everything learners do on Agylia. Fully backwards compatible with your legacy content library.

Action Based Learning – apply and reinforce your training programmes by setting practical tasks and activities for individuals and groups to complete in the real world – supporting the 70:20:10 model.

Security – Agylia protects your IP and your users' personal information. We have a range of enhanced security options tailored to meet specific security, regulatory and compliance requirements.

True cloud – massive scalability of user numbers, resilience, security and ease of implementation with no onsite software needed.

Rapid implementations – the days of a 12-month LMS implementation are over. With Agylia, you can expect real agility around the LMS implementation – that means days and weeks rather than months and years.
